

## Criar grupo dinâmico com base em atributo personalizado

Grupo dinâmico: É um grupo que **adiciona e remove usuários automaticamente** conforme regras definidas. ex.: departamento, cargo, localização ou até atributos personalizados.

Tens duas formas de criar um grupo dinâmico baseado em atributo personalizado no Microsoft Entra ID, pelo Portal ou via PowerShell/Graph.

### Criar pelo Portal do Entra

1. Vai em <https://entra.microsoft.com>
2. entra em **Groups** → **All groups** → **New group**

Preenche:

3. Group type → Security (ou Microsoft 365)
4. Group name → exemplo: RH
5. Membership type → Dynamic User

The screenshot shows the 'New Group' form in the Microsoft Entra admin center. The left sidebar contains navigation links for Home, Agents, Favorites, Entra ID, Overview, Users, Groups, Devices, Enterprise apps, App registrations, Roles & admins, Delegated admin partners, Domain services, Conditional Access, Multifactor authentication, Identity Secure Score, Authentication methods, Password reset, Custom security attributes, and Certificate authorities. The main form fields are: Group type (Microsoft 365), Group name (RH), Group email address (RH), Group description (funcionarios RH), and Membership type (Dynamic User). A warning message states: 'Use group sensitivity labels in Microsoft Entra ID to classify and protect Microsoft 365 groups. Learn more about assigning sensitivity labels in Microsoft Entra ID.' Below the form, there is a section for 'Owners' with '1 owner selected' and a link to 'Add dynamic query'.

The screenshot shows the 'Dynamic membership rules' configuration page. The top bar includes 'Home > Groups | All groups > New Group >' and a close button. The page title is 'Dynamic membership rules'. Below the title are links for 'Save', 'Discard', and 'Got feedback?'. The 'Configure Rules' tab is active, and the 'Validate Rules' tab is also visible. A note states: 'You can use the rule builder or rule syntax text box to create or edit a dynamic membership rule. Learn more'. The rule builder table has four columns: 'And/Or', 'Property', 'Operator', and 'Value'. The first row shows 'And' selected for 'And/Or', 'department' for 'Property', 'Equals' for 'Operator', and 'RH' for 'Value'. Below the table are links for 'Add expression' and 'Get custom extension properties'. The 'Rule syntax' section shows the rule syntax: '(user.department -eq "RH")'.
